

Is DER integration costing more than it returns?

Unify your fleet through one connectivity layer.

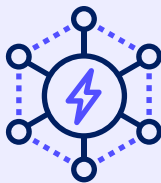

The challenge

Per-OEM integrations, vendor lock-in, and aggregator fees make DER programs expensive, slow, and hard to scale.

The solution

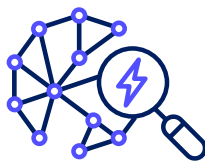

One connectivity layer unifies fragmented assets and gives operators direct, real-time reach and control.

4 steps to der interoperability

1. Connect through one interface

Reach any DER from any manufacturer through a single, secure integration point.

2. Standardize across the fleet

Use a protocol-agnostic layer that scales from six devices to 50,000.

3. Own your connections

Keep direct, device-level control instead of routing access through an aggregator.

4. Secure every data flow

Authenticate each connection so dispatch data stays authorized and auditable.

See how Intertrust Connect can accelerate your DER program.
